

SPIRAL WOUND GASKETING

HIGH TEMPERATURE, HIGH PRESSURE, EXTREME SEALING SOLUTION

- Combination of various metals and filler materials to meet your application requirements
- High temperature sealing
 - THERMa-PUR filler resistant up to 1,832°F (1,000°C) temperature in continuous use
 - Other filler compounds available for specific applications
- Chemically resistant
- Water contamination and degradation resistant
- Pressure energized for increased sealing capabilities
- Inner gasket ring prevents radial buckling, protrusions, and ultimately sealing failure
- Standard Spiral Configurations
 - RW/RWI/SW/SWI
- Easy installation and maintenance
